

A New Era in Infant Care

BabyAir™

The Easy, Safe & Effective Way to Deliver Inhaled Medications to Infants.

Recent studies show that infants' poor acceptance of face masks greatly reduces the effectiveness of aerosol therapy.

Replacing uncomfortable face masks that young children resist, *BabyAir* is an innovative hood delivery system that dispenses aerosol medications in a way that's simple, safe, effective – even fun.

Simple, Safe & Ingenious

Instead of the constant struggle to get infants to accept a face mask, *BabyAir*'s hood simply creates a space in which the infant breathes normally - inhaling the correct dosage of medicine with every treatment. Set up in seconds, made of ultra-safe, baby-proof plastic, *BabyAir* is equipped to accept various nebulizers. Parents or professional care givers just add the medicine, insert the nebulizer, and adjust the delivery angle of a special funnel that directs the medication towards the baby's nose and mouth.

Fun & Care

Attractively built, the toy-like design keeps babies calm and relaxed while *BabyAir* works to administer their aerosol-based medication.

Whether awake or asleep, the infant inhales the correct dosage with every treatment.

More Effective Care Means Quicker Relief or Recovery

Clinical studies have proven that hood-based aerosol delivery is an effective and more acceptable method than conventional mask devices. When infants actually receive the optimum dose of medication - their recovery is faster.

The Very Best Care - BabyAir

Up to 30% of babies need inhalation during infancy. For parents & professionals, at home, in hospitals or other medical centers, *BabyAir* introduces a new era in infant inhalation care.

BabyAir™

- SAFE & STURDY MATERIALS.
- LIGHTWEIGHT & EASY TO USE.
- CONVENIENT FOLD AWAY DESIGN.
- EASY TO CLEAN, EASY TO ASSEMBLE, EASY TO ADMINISTER.
- PROMOTES SATISFACTION.
- PATENT APPROVED.
